SABR – This Work

Regularisation Comparison

Worst-Case Loss Approximation Precision

Box Abstraction Size Growth

Growth rate $\kappa = \frac{\mathbb{E}[\text{Output Box Size}]}{\text{Input Box Size}} = \frac{\text{Diagram of Output Box}}{\text{Diagram of Input Box}}$

The diagram shows a fraction where the numerator is a large gray square with a bracket to its right labeled δ_{out} , and the denominator is a small blue square with a bracket to its right labeled δ_{in} .

Box Abstraction Size Growth

Growth rate $\kappa = \frac{\mathbb{E}[\text{Output Box Size}]}{\text{Input Box Size}} = \frac{\text{Diagram: A large gray square with a bracket to its right labeled } \delta_{\text{out}}}{\text{Diagram: A small blue square with a bracket to its right labeled } \delta_{\text{in}}}$

Linear layers: κ is independent of input box scale:

$$\kappa \sim [10, 100]$$

Diagram: A large gray square = W Diagram: A small blue square + b

Box Abstraction Size Growth

Growth rate $\kappa = \frac{\mathbb{E}[\text{Output Box Size}]}{\text{Input Box Size}} = \frac{\text{gray box} \delta_{\text{out}}}{\text{blue box} \delta_{\text{in}}}$

Linear layers: κ is independent of input box scale:

$$\kappa \sim [10, 100]$$

$$\text{gray box} = W \text{ blue box} + b$$

ReLU layers: κ depends on box scale and box centre:

$$\kappa \sim [0, 1]$$

$$\text{gray box} = \max(\text{blue box}, 0)$$

Box Abstraction Size Growth

Growth rate $\kappa = \frac{\mathbb{E}[\text{Output Box Size}]}{\text{Input Box Size}} = \frac{\text{Diagram: A large gray square with a bracket to its right labeled } \delta_{\text{out}}}{\text{Diagram: A small blue square with a bracket to its right labeled } \delta_{\text{in}}}$

Linear layers: κ is independent of input box scale:

$$\kappa \sim [10, 100]$$

$$\text{Diagram: A gray square} = W \cdot \text{Diagram: A blue square} + b$$

ReLU layers: κ depends on box scale and box centre: $\text{Diagram: A gray square} = \max(\text{Diagram: A blue square}, 0)$

$$\kappa \sim [0, 1]$$

Box Abstraction Size Growth – ReLUs

Box Abstraction Size Growth – ReLUs

For input box sizes $\varepsilon \rightarrow 0$

κ = Portion of active ReLUs

For input box sizes $\varepsilon \rightarrow \infty$

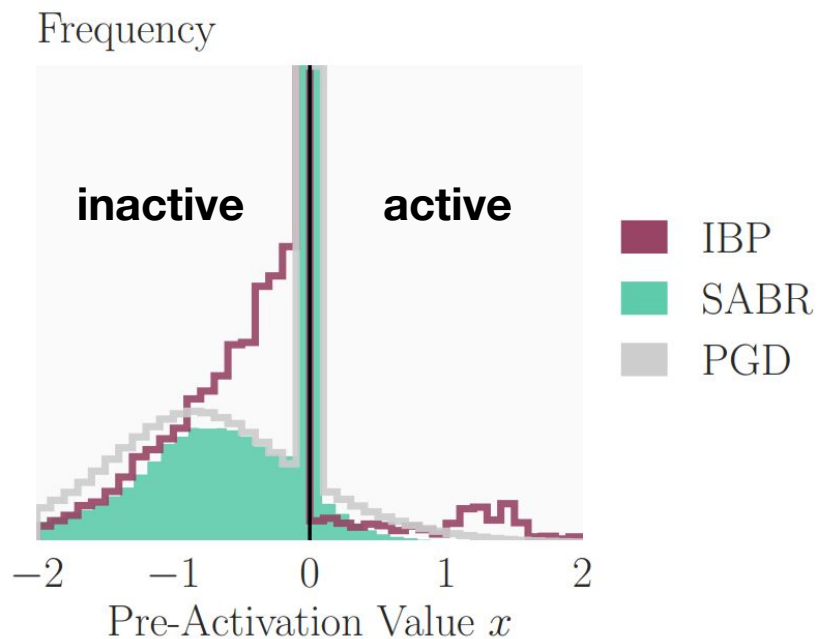

$\kappa = 0.5$

In-between:

κ depends on box positions
